10.A

Q2.

1

Create Dynamic web project

Create a package as com.dxc.webservice

create a class NameConverter

Type the method nameConversion

initiate webserver

Open the soapUI file

Create new soap project

Choose the method from it and type the inputs

2.

In eclipse -> file ->new->dynamic project name as (RESTFullWebService)

Select runtime as apache tomcat 9.0, then

Dynamic module version 3.0 then, finish

Need to import all dependencies in pom.xml when required

And then add required jar files in lib folder

Then include servlet and servlet mapping in web.xml

Then java resources->right click-> new->class name as (celsiustofahrenheith) and another class (fahrenheittocelsius)

Package as com.dxc.ws

Write the code in class and keeping path

Right click on project and run as server

And open browser and click the link

localhost:8080/RESTFullWebService/celsiustofahreinheith/
